Lisa

I have looked at this application and would comment as follows:-

- In zone 2 the 3 bedroom house is close enough to the Great North road for me to have some noise concerns. I think a condition needs to be imposed requiring an acoustic report and, if necessary details of attenuation approved prior to development. – *Prior to the commencement of the development, the developer should submit to the Local planning Authority a noise report. The report should include details of the noise exposure on the site, an assessment of the internal noise levels for habitable rooms and external amenity space. Where these levels will exceed the good standard indicated in BS8233 for internal noise levels and the WHO 55dBA<sub>Leq</sub> for amenity space, a scheme of attenuation shall be submitted for approval. Where this scheme involves reliance on closed windows to achieve the required attenuation levels, details of alternative ventilation, capable of providing background and rapid ventilation levels shall also be submitted.*
- The close proximity of noise sensitive properties is such that demolition and construction nuisance issues are significant. Hours of work in particular need to be controlled, I would recommend working hours are restricted to 08:00 – 18:00 for week days 08:00-13:00 Saturdays and no Sunday or bank holiday working. Attached is an informative, that could also be provided.
- The standard contaminated land condition needs to be used, this is attached. An informative could be added indicating that if stage 1, the site characterisation indicates there are no risks the condition can be determined at this point.

I hope this is satisfactory, if you need to get back to me, after today I'm not back until Monday

Roger Evans  
Environmental Health Officer

Unless otherwise agreed by the Local Planning Authority, development other than that required to be carried out as part of an approved scheme of remediation must not commence until conditions 1 to 4 have been complied with. If unexpected contamination is found after development has begun, development must be halted on that part of the site affected by the unexpected contamination to the extent specified by the Local Planning Authority in writing until condition 4 has been complied with in relation to that contamination.

### **1. Site Characterisation**

An investigation and risk assessment, in addition to any assessment provided with the planning application, must be completed in accordance with a scheme to assess the nature and extent of any contamination on the site, whether or not it originates on the site. The contents of the scheme are subject to the approval in writing of the Local Planning Authority. The investigation and risk assessment must be undertaken by competent persons and a written report of the findings must be produced. The written report is subject to the approval in writing of the Local Planning Authority. The report of the findings must include:

- (i) A survey of the extent, scale and nature of contamination;
- (ii) An assessment of the potential risks to: • human health, • property (existing or proposed) including buildings, crops, livestock, pets, woodland and service lines and pipes, • adjoining land, • ground-waters and surface waters, • ecological systems, • archaeological sites and ancient monuments;
- (iii) An appraisal of remedial options, and proposal of the preferred option(s).

This must be conducted in accordance with DEFRA and the Environment Agency's *'Model Procedures for the Management of Land Contamination, CLR 11'*.

### **2. Submission of Remediation Scheme**

A detailed remediation scheme to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings and other property and the natural and historical environment must be prepared, and is subject to the approval in writing of the Local Planning Authority. The scheme must include

All works to be undertaken, proposed remediation objectives and remediation criteria, timetable of works and site management procedures. The scheme must

Ensure that the site will not qualify as contaminated land under Part 2A of the Environmental Protection Act 1990 in relation to the intended use of the land after remediation.

### **3. Implementation of Approved Remediation Scheme**

The approved remediation scheme must be carried out in accordance with its terms prior to the commencement of development other than that required to carry out remediation, unless otherwise agreed in writing by the Local Planning Authority. The

Local Planning Authority must be given two weeks written notification of commencement of the remediation scheme works.

Following completion of measures identified in the approved remediation scheme, a verification report (referred to in PPS23 as a validation report) that demonstrates the effectiveness of the remediation carried out must be produced, and is subject to the approval in writing of the Local Planning Authority.

#### **4. Reporting of Unexpected Contamination**

In the event that contamination is found at any time when carrying out the approved development that was not previously identified it must be reported in writing immediately to the Local Planning Authority. An investigation and risk assessment must be undertaken in accordance with the requirements of condition 1, and where remediation is necessary a remediation scheme must be prepared in accordance with the requirements of condition 2, which is subject to the approval in writing of the Local Planning Authority.

Following completion of measures identified in the approved remediation scheme a verification report must be prepared, which is subject to the approval in writing of the Local Planning Authority in accordance with condition 3.

#### **5. Long Term Monitoring and Maintenance**

A monitoring and maintenance scheme to include monitoring the long-term effectiveness of the proposed remediation over a period of [x] years, and the provision of reports on the same must be prepared, both of which are subject to the approval in writing of the Local Planning Authority.

Following completion of the measures identified in that scheme and when the remediation objectives have been achieved, reports that demonstrate the effectiveness of the monitoring and maintenance carried out must be produced, and submitted to the Local Planning Authority.

This must be conducted in accordance with DEFRA and the Environment Agency's '*Model Procedures for the Management of Land Contamination, CLR 11*'.

**Reason (common to all):** To ensure that risks from land contamination to the future users of the land and neighbouring land are minimised, together with those to controlled waters, property and ecological systems, and to ensure that the development can be carried out safely without unacceptable risks to workers, neighbours and other offsite receptors [in accordance with policy \_\_\_\_ of the adopted Local Plan (date)].

## CONSTRUCTION NOISE AND DUST CONTROL

### Noise control

1. All works and ancillary operations which are audible at the site boundary, or at such other place as may be agreed with the Council, shall be carried out only between the hours of :  
8.00am and 6.00pm on Mondays to Fridays  
8.00am and 1.00pm Saturdays  
and at no time on Sundays and Bank Holidays
2. The best practicable means, as defined in section 72 of the Control of Pollution Act 1974, to reduce noise to a minimum shall be employed at all times
3. All plant and machinery in use shall be properly silenced and maintained in accordance with the manufacturers' instructions
4. All compressors shall be sound reduced models, fitted with properly lined and sealed acoustic covers, which shall be kept closed whenever the machines are in use. All ancillary pneumatic percussive tools shall be fitted with mufflers or silencers of the type recommended by the manufactures.
5. All machines in intermittent use shall be shut down during intervening periods between work, or throttled down to a minimum. Noise emitting equipment, which is required to operate continuously, shall be housed in suitable acoustic enclosures.
6. Items of plant and equipment shall be maintained in good condition so that extraneous noise from mechanical vibration, squeaking or creaking is reduced to a minimum.
7. All pile driving shall be carried out by a recognised noise reducing system.
8. Where practical, rotary drills and bursters, actuated by hydraulic or electric power shall be used for excavating hard material
9. In general, equipment for breaking concrete and the like, shall be hydraulically actuated.
10. 'BS 5228 Noise Control on Construction Sites' should be referred to for guidance in respect of all work carried out by the developer, their main contractor and any sub contractors.
11. Any emergency deviation from these conditions shall be notified to the Council without delay
12. Any planned deviations from these conditions for special technical reasons, shall be negotiated with Council at least 14 days prior to the commencement of the specific work.

13. Permissible noise levels are not specified at this stage.

**Dust control**

1. All efforts shall be made to reduce dust generation to a minimum
2. Stock piles of materials for use on the site, or disposal, that are likely to generate dust, shall be sited so as to minimise any nuisance to residents or neighbouring businesses. Materials for disposal shall be moved off site as quickly as possible.
3. Water sprays shall be used, as and when necessary, to reduce dust from particularly "dusty" activities or stock piles.
