

Hatfield Impact Statement

Physical Impact:

The proposed development is on roof building, and cannot be seen from street level, but can be seen by surrounding, taller buildings.

Environmental Impact:

We envisage that the development will have minimal negative environmental impact, as the panels do not create any bi-products. Due to the nature of the development, the proposal will also decrease the environmental impact of Hatfield due to the fact that it will provide renewable energy.

Impact from Installation:

The solar PV installation will be carried out over a short period of time, with minimal disruption to the surrounding area; by choosing appropriate methods to minimise work time.

Impact on Waste and Refuse Management:

The proposed development will not affect the waste and refuse of the building, as all waste will be taken from the site once the installation is complete.
