DESCRIPTION

Gsm Cell Phone Controlled Electric Gate & Garage Door Opener

Do you have electric gates on your house or business? Tired of looking for keyfobs? Batteries failing? Did you leave it indoors again?

Your gate problems are over with this clever little gadget.

The GSM Gate Opener incorporates a professional industrial grade GSM chip, that will activate your electric gates or garage doors, to open and close when the number on the installed sim card is dialled.

The system operates in the GSM module Quad-band 850/900/1800/1900Mhz.

Up to 50 users can be authorised to open your gates. If the call is placed by an unauthorised number, it will reject the call and the gate will not open.

You must have credit on the sim in the receiver, but it will not charge you each time as it rejects the call and simultaneously opens the gate.

No need to carry or buy a separate remote.

Open your gates in advance or from anywhere or for anyone while you are not there. Just dial the number from anywhere worldwide!

Switch on heating with a FREE call from your mobile phone.

Receive a phone call if your house Alarm is activated

Monitor Septic tanks, silo levels, cattle feeders & troughs, flood alarms, water pumps.....etc, even your car alarm if need be.

These can also be used to turn on your heating system, all remotely - they have so many uses.

They have an Alarm input which can be used to link to an Alarm system - and you'll get a text when the alarm sounds

Numbers can added or deleted effortlessly

No call or text charges

Remote operation from anywhere in the world at anytime.
