Cube Garden Room Range

The cube garden room is our stylish, modern and contemporary cuboid garden room.

Dark grey PVCu double patio doors, fixed glass window panels and tall opening window. All our garden rooms have professionally plaster boarded and skimmed internal walls and ceiling and are externally clad in beautiful specially treated micro-brown tanalised European Redwood tounge and groove timber.

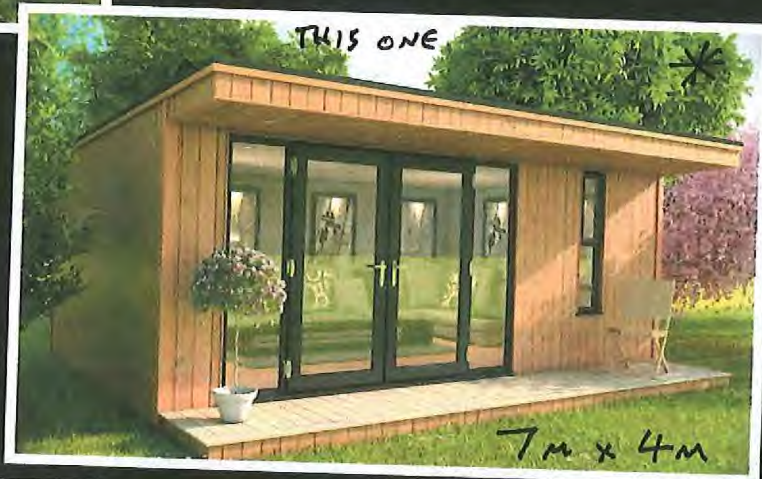

Corner Garden Room Range

The corner garden room adds a new dimension to our garden room range by creating a contemporary outdoor living room whilst maintaining a large clear view of your garden.

Dark grey PVCu double patio doors, fixed glass window panels, structural corner post and a tall opening window. External recessed aluminium down lights are also included.

Canopy Garden Room Range

The canopy garden room includes a 1m projecting roof canopy along the entire front of the structure. This extension of the roofing system adds dimension and provides additional shelter from the elements. Recessed aluminium down lights are also included underneath the projecting roof canopy. Dark grey PVCu double patio doors, fixed glass window panels and tall opening window.

Concave Garden Room Range

The concave garden room includes a 1m projecting roof canopy along the entire front of the structure with the addition of 1m projecting enclosed walls at both ends. This extension of the structure creates a recessed dimension and provides additional shelter from the elements. Aluminium down lights are also included underneath the projecting roof. Dark grey PVCu double patio doors, fixed glass window panels and tall opening window.

Oeco Construction Overview

REF ELEM 5
D

Doors & Windows:

All our garden rooms and garden offices are supplied with the highest quality dark grey PVC-U door and window profiles. The high quality dark grey profiles compliment the European Redwood external timber cladding. In addition the dark grey profiles offer elegant sight lines together with high security features, incredible strength and thermal efficiency.

Each door and window section is supplied with heat saving 28mm argon gas filled double glazed units and warm edge super spacer bars as standard.

European Redwood Timber Cladding:

Each garden room or garden office is clad in specially treated micro-brown tanalised European Redwood tongue and groove timber. European Redwood is designed for long-term external use and is perfect for a wide range of applications, including garden rooms and garden offices. European Redwood maintains its size and shape, offers stability and durability plus improves thermal, hygiene, wood preservation and weather resistance. The typical lifespan for European Redwood timber is 30+ years.

Foundations:

You do not normally need to provide a concrete base for our garden structures. To save you the expense and inconvenience, we use specially designed, concrete pile foundations combined with heavy duty galvanised steel legs and plates. The steel legs can be adjusted which means we can install our garden structures onto either flat or slightly uneven surfaces.

Your garden building is slightly raised off the ground to allow a vented space underneath. This ensures that the structure will not be affected by rising damp.

Heavy Duty Structural Timbers:

All our garden structures are manufactured using traditional timber framed walls and floor. The walls and floor are constructed using heavy duty solid structural graded timber frames that carry the load of the building. The walls and floor are manufactured using C16 (British Standard) graded structural timber.

The floor timbers are pressure treated and impregnated with Tanelith E wood preservative. The high grade structural timbers are obtained from well managed, sustainable forests.
