Address: 37 Broadwater Road, Welwyn Garden City, AL7 3AX

Application Details: Construction of new build of 22 x 2 Bedroom and 2 x 3 Bedroom residential apartments with balconies and a roof garden. Layout of 26 car parking spaces, cycle parking, refuse store, internal access routes, landscaping and supporting infrastructure.

Considerations relevant to Environmental Health for this application

Noise
Contaminated Land

Conclusion

Recommend planning application is permitted
Recommend planning application is permitted but with conditions
Recommend planning application is refused

Conditions and Informatives

Noise

A noise impact assessment (following the guidance of PROPG) will need to be submitted for this development.

The noise impact assessment should include, details of a survey of the existing environmental noise in the area and any noise sources being introduced to the area because of the proposed development.

The standards that are expected for residential properties are those indicated in BS8233:2014. It should be noted that we will also make reference to standards set out in the World Health Organisation guidance documents.

We expect developments to have acceptable amenity space for occupants and noise levels for such spaces must not exceed 55dB LAeq,T.

If opening windows (most likely for purge ventilation during the summer months) will negate the acoustic insulation provided by windows leading to noise levels higher than those within BS8233:2014 then extra measures will be required. A suitable mechanical ventilation system will need to be incorporated into the building which must comply with the ventilation requirements as stipulated in The Noise Insulation
Regulations 1975. We must stress that the use of mechanical ventilation is a last resort. Attenuation should be sought by good acoustic design (PROPG) in the first instance.

The impact of existing and new commercial noise sources should be assessed in accordance with BS4142:2014. When noise sources show signs of tonality we require noise levels to be 10dB below background noise level at the nearest receptor location. In instances where the noise source presents no tonality we require the noise level to be 5dB below the background noise level at the nearest receptor location.

Noise is a key consideration at the planning stage and statutory nuisance investigations after implementation are a last resort only. This method will not be intended as a failsafe and we stipulate that good acoustic design at the outset is key.

**Contaminated Land:**

Unless otherwise agreed by the Local Planning Authority, development other than that required to be carried out as part of an approved scheme of remediation must not commence until conditions 1 to 4 have been complied with. If unexpected contamination is found after development has begun, development must be halted on that part of the site affected by the unexpected contamination to the extent specified by the Local Planning Authority in writing until condition 4 has been complied with in relation to that contamination.

1. Site Characterisation

An investigation and risk assessment, in addition to any assessment provided with the planning application, must be completed in accordance with a scheme to assess the nature and extent of any contamination on the site, whether or not it originates on the site. The contents of the scheme are subject to the approval in writing of the Local Planning Authority. The investigation and risk assessment must be undertaken by competent persons and a written report of the findings must be produced. The written report is subject to the approval in writing of the Local Planning Authority. The report of the findings must include:

(i) a survey of the extent, scale and nature of contamination;
(ii) an assessment of the potential risks to: • human health, • property (existing or proposed) including buildings, crops, livestock, pets, woodland and service lines and pipes, • adjoining land, • groundwaters and surface waters, • ecological systems, • archeological sites and ancient monuments;
(iii) an appraisal of remedial options, and proposal of the preferred option(s). This must be conducted in accordance with DEFRA and the Environment Agency’s ‘Model Procedures for the Management of Land Contamination, CLR 11’.

2. Submission of Remediation Scheme

A detailed remediation scheme to bring the site to a condition suitable for the intended use by removing unacceptable risks to human health, buildings and other property and the natural and historical environment must be prepared, and is subject to the approval in writing of the Local Planning Authority. The scheme must include
all works to be undertaken, proposed remediation objectives and remediation
criteria, timetable of works and site management procedures. The scheme must
ensure that the site will not qualify as contaminated land under Part 2A of the
Environmental Protection Act 1990 in relation to the intended use of the land after
remediation.

3. Implementation of Approved Remediation Scheme
The approved remediation scheme must be carried out in accordance with its terms
prior to the commencement of development other than that required to carry out
remediation, unless otherwise agreed in writing by the Local Planning Authority. The
Local Planning Authority must be given two weeks written notification of
commencement of the remediation scheme works.
Following completion of measures identified in the approved remediation scheme, a
verification report (referred to in PPS23 as a validation report) that demonstrates the
effectiveness of the remediation carried out must be produced, and is subject to the
approval in writing of the Local Planning Authority.

4. Reporting of Unexpected Contamination
In the event that contamination is found at any time when carrying out the approved
development that was not previously identified it must be reported in writing
immediately to the Local Planning Authority. An investigation and risk assessment
must be undertaken in accordance with the requirements of condition 1, and where
remediation is necessary a remediation scheme must be prepared in accordance
with the requirements of condition 2, which is subject to the approval in writing of the
Local Planning Authority.
Following completion of measures identified in the approved remediation scheme a
verification report must be prepared, which is subject to the approval in writing of the
Local Planning Authority in accordance with condition 3.

5. Long Term Monitoring and Maintenance
A monitoring and maintenance scheme to include monitoring the long-term
effectiveness of the proposed remediation over a period of years, and the provision
of reports on the same must be prepared, both of which are subject to the approval
in writing of the Local Planning Authority.
Following completion of the measures identified in that scheme and when the
remediation objectives have been achieved, reports that demonstrate the
effectiveness of the monitoring and maintenance carried out must be produced, and
submitted to the Local Planning Authority.
This must be conducted in accordance with DEFRA and the Environment Agency’s

Reason (common to all): To ensure that risks from land contamination to the future
users of the land and neighbouring land are minimised, together with those to
controlled waters, property and ecological systems, and to ensure that the
development can be carried out safely without unacceptable risks to workers,
neighbours and other offsite receptors.
Informative:

**Noise control - construction**

1. All works and ancillary operations which are audible at the site boundary, or at such other place as may be agreed with the Council, shall be carried out only between the hours of:
   - 8.00am and 6.00pm on Mondays to Fridays
   - 8.00am and 1.00pm Saturdays
   - and at no time on Sundays and Bank Holidays

2. The best practicable means, as defined in section 72 of the Control of Pollution Act 1974, to reduce noise to a minimum shall be employed at all times

3. All plant and machinery in use shall be properly silenced and maintained in accordance with the manufacturers' instructions

4. All compressors shall be sound reduced models, fitted with properly lined and sealed acoustic covers, which shall be kept closed whenever the machines are in use. All ancillary pneumatic percussive tools shall be fitted with mufflers or silencers of the type recommended by the manufactures.

5. All machines in intermittent use shall be shut down during intervening periods between work, or throttled down to a minimum. Noise emitting equipment, which is required to operate continuously, shall be housed in suitable acoustic enclosures.

6. Items of plant and equipment shall be maintained in good condition so that extraneous noise from mechanical vibration, squeaking or creaking is reduced to a minimum.

7. All pile driving shall be carried out by a recognised noise reducing system.

8. Where practical, rotary drills and bursters, actuated by hydraulic or electric power shall be used for excavating hard material

9. In general, equipment for breaking concrete and the like, shall be hydraulically actuated.

10. 'BS 5228 Noise Control on Construction Sites' should be referred to for guidance in respect of all work carried out by the developer, their main contractor and any sub contractors.

11. Any emergency deviation from these conditions shall be notified to the Council without delay

12. Any planned deviations from these conditions for special technical reasons, shall be negotiated with Council at least 14 days prior to the commencement of the specific work.
13. Permissible noise levels are not specified at this stage.

**Dust control**

1. All efforts shall be made to reduce dust generation to a minimum.

2. Stock piles of materials for use on the site or disposal, that are likely to generate dust, shall be sited so as to minimise any nuisance to residents or neighbouring businesses. Materials for disposal shall be moved off site as quickly as possible.

3. Water sprays shall be used, as and when necessary, to reduce dust from particularly “dusty” activities or stock piles.
