

There are a great many flaws in the design and these errors seem not to be addressed. I would also very much like to know how and when this application was "submitted and validated" on the same day. This is quite unheard of and considered impossible when submissions by residents and local business usually have to re-submit various amendments.

I would be grateful to hear any explanation for such a peculiar event. I should also like to know why, considering the strong 'Heritage Aspect' that pervades Welwyn Garden City, the consultants retained by the council seem unaware that the original building was an award winner.

As a local resident I, naturally expect elected members of the council to place the Welwyn Garden "ethos" of the town firstly. This design does not do this. I object strongly to this design and fully expect the council to act in a just and reasonable manner, by rejecting it immediately. It would seem a review of the whole matter is urgently required,

yours faithfully,
