

Description of proposal for change in front door and side door at 68 Brockwood Lane

We are currently undertaking an extension at our property and we are going to be putting in a side door as per our agreed plans.

We would like this door to be a composite door made of UPVC in a design and colour that compliments the front door of the property which we are also seeking to replace.

We have a number of reasons for wishing to replace the front door to the property as it is an old door which leaks and is showing signs of age and wear (the letter box is broken). We would also like to change the design so that it improves the appearance of the property and replaces a very 'plastic looking broken door' with a composite door that both compliments the side door of the property but also compliments that of our neighbours.

We would like to replace the front door with design A (please see attached picture) in 'Chartwell Green'. This design is similar to a number of doors that are located on Brockwood Lane so would be in keeping with the rest of the properties situated on the lane.

We would like to use design B (please see attached picture) for the side door. We intend for this to be the same colour as the front door. Again there are a range of door designs down Brockwood Lane and this would be in keeping with these.

There are a range of different coloured doors from yellow, blue, black, and green and we feel that the proposed colour would not jar with any already on the street and would improve the look of our property significantly as well as enhancing our security and energy efficiency.

We are keen to complete these works as soon as possible as our extension is currently progressing well so would seek your permission as soon as possible particularly in relation to the side door of the property.
