Support

Comments:

I support this application in its entirety. I would add the following:

Silver birch tree (T4) interferes with my TV reception especially with a full canopy. In high winds the branches whip chimney stack and are in close proximity to the aerial. The height and spread should be reduced accordingly. This may require more than 33%.

The hornbeam (T1), nearest to the boundary of 2 W Rise in particular (one of a group of four), should be reduced in height and width. It is top heavy having been badly pruned in the past. It straddles the boundary and blocks light to my living room.

Oak (T3) should be replaced in order to avoid future interference with my property both in terms of root structure and upper branches.

Case Officer:
Ms Emma Griffin
