Dear all,

I am writing to lodge my objection to this development in its proposed form with nearly 3000 flats.

I do not understand how this can even get to this stage with the planning policies that are set out for our Garden City community.

Blocks A – E too tall and are the first thing visitors and people passing on the train will see of our world famous town with its historical ethos of harmony between town and country...

They need to be reduced in height to maximum 5 floors.

If this gets the go ahead then it will be the green light for any development in this town to build high and dense.

We will end up with a town not unlike Wembley Park, an overdeveloped ugly concrete/glass jungle.

Where will these residents park?

Where will their kids go to school?

What will be the impact on traffic levels, road safety and pollution levels?

What about doctors surgeries and social care and the already ridiculous waiting times for an appointment?

What impact will there be for commuters as these residents will more than likely have come from London and will continue to commute there everyday to work.

This town no longer has a proper hospital thanks to the diabolical decision to close down the QE2 and A&E(for houses) for a glorified doctors surgery and the ill folk expected to negotiate the traffic clogged A1M to Lister Hospital..

All this now being considered after the recent kerfuffle to reject the application from JD Wetherspoon to open a pub on Parkway..

With this amount of densely stacked accommodation, what sort of quality of life will these people have??

You stare out of your window into some else's window??

Are these not the planning mistakes of the 1960's again??

This needs to go back to the drawing board.

If it doesn't then the recently erected statue of Ebenezer Howard may as well be toppled as this ludicrous plan and that of neighbouring Wheat Quarter and Southside developments will be an insult to his vision and memory.

Your sincerely
